Fractures | Health information | Bupa UK A transverse fracture is when your bone has a horizontal break along your bone. An oblique fracture is when you break the bone at an angle. An intra-articular fracture is a fracture that extends into your joint. Compression fractures are when you get broken vertebrae in your spine. The vertebrae (back bone) collapse onto itself and get squashed. Fractures: Types, causes, symptoms, and treatment There are several different ways in which a bone can fracture; for example, a break to the bone that does not damage surrounding tissue or tear through the skin is known as a closed fracture. Bone fracture - Wikipedia A bone fracture may be the result of high force impact or stress, or a minimal trauma injury as a result of certain medical conditions that weaken the bones, such as osteoporosis, osteopenia, bone cancer, or osteogenesis imperfecta, where the fracture is then properly termed a pathologic fracture.

Fracture - Wikipedia The word fracture is often applied to bones of living creatures (i.e. a bone fracture), or to crystalline materials, such as gemstones or metal. Sometimes, individual crystals fracture without the structure actually separating into two or more pieces. How to Treat a Stress Fracture: 10 Steps (with Pictures ... Schedule an appointment with your doctor. If you suspect you have a stress fracture, you will want to visit with your doctor. Your doctor will be able to confirm the fracture, where it is, and how best to treat it. Fractures (Broken Bones) - OrthoInfo - AAOS Common types of fractures include: Stable fracture. The broken ends of the bone line up and are barely out of place. Open, compound fracture. The skin may be pierced by the bone or by a blow that breaks the skin at the time of the fracture. The bone may or may not be visible in the wound. Transverse fracture.

Fracture | Definition and Patient Education A fracture is a broken bone. It can range from a thin crack to a complete break. Bone can fracture crosswise, lengthwise, in several places, or into many pieces. Hip fracture - NHS Hip fractures are cracks or breaks in the top of the thigh bone (femur) close to the hip joint. They're usually caused by a fall or an injury to the side of the hip, but may occasionally be caused by a condition, such as cancer, weakening the hip bone.
